Your AcerPower desktop configuration provides high-speed performance in a small footprint — making it perfect for small offices or general business use.

The system board features the common functions offered by a high-performance board. It has a power-management function that conforms to the power-saving standards of the U.S. Environmental Protection Agency (EPA) Energy Star program. It also supports Plug-and-Play features.

Overview

The AcerPower 6000 system supports Intel Pentium processors with MMX (MultiMedia eXtensions) technology and the new Celeron processor. The Celeron processor is Intel's Pentium II cost-down solution. It comes without a second-level cache. It has two ISA and two PCI slots for future expansion. The system memory is expandable to 256 MB via two onboard 168-pin DIMM (double in-line memory module) sockets.

The system also features a 3-D video function with AGP (Accelerated Graphics Port) support and a 3-D audio function.

Aside from the standard I/O (input/output) interfaces such as one serial port, one parallel port, and PS/2 keyboard and mouse ports, the system also offers two USB (Universal Serial Bus) ports, one VGA (Video Graphics Accelerator) port, one Feature connector, one mono Microphone-in port, one stereo Line-in port, one Line-out port, and one Game/MIDI (Musical Instrument Digital Interface)

port. These additional ports are included to enable the system to accommodate additional peripherals.

The system is fully compatible with MS-DOS V6.X, OS/2, SCO UNIX, Windows NT, and Windows 95/98 operating systems.
